

[Version 0.15.256](#) of the *ADVANCE Flow Editor & Engine* are available for download on the project's sourceforge site.

In order to run the Editor, go to the **bin** folder and execute **flow\_editor.exe** on Windows and **flow\_editor** on \*Nix machines.

Notable changes:

- added several blocks, including the prediction blocks from D4.5
- the type comparison in the engine compiler now properly handles recursive type definitions
- added tooltips and short descriptions to blocks, the flow and palette tree browsers
- added ability to filter blocks in the block palette based on a wildcard expression, e.g., **conv\***
- several minor bug fixes
